

## **ipConfigure Appoints Steve Lewis as Vice President of Sales and Marketing**

*Today, ipConfigure announced the appointment of Steve Lewis as Vice President of Sales and Marketing. Lewis will be responsible for the areas of strategic account acquisitions, marketing and global expansion.*

([PRWEB](#)) January 15, 2010 -- The appointment of Steve Lewis as Vice President of Sales and Marketing is designed to build upon ipConfigure's leading position in the IP Video Surveillance sector and increase the company's visibility throughout the industry. "Steve has joined ipConfigure during exciting times and we are thrilled to have him on the team," said Christopher Uiterwyk, Co-Founder and CEO. "Steve is a 'one of a kind' in the video surveillance community bringing his industry knowledge and understanding of the past, present and future. His forward thinking and sound business sense will be a force multiplier for achieving our growth plans."

Prior to joining ipConfigure, Lewis served as the Director of Business Development for IQinVision managing OEM relationships and the technology partner program. He also worked for Axis Communications, a leader in network video solutions, where he established and managed strategic partnerships with IBM, Cisco, Sun and Motorola. "It is great to be part of this innovative and dynamic software company," stated Lewis. "ipConfigure is on a meteoric rise and uniquely positioned for growth in the market with their browser-based UI solution and the ability to scale."

About ipConfigure: Founded in 2003, ipConfigure is a privately owned video surveillance software developer and a leader in enterprise IP video surveillance solutions. The company's core products include, Surveillance Manager Basic and Enterprise Surveillance Manager with License Plate Recognition, which are available as software only or pre-configured on a Video Surveillance Appliance and capable of supporting unlimited cameras, locations and users through a unified browser-based interface. ipConfigure has successfully deployed systems in facilities ranging from nuclear power plants to public schools all based on a non-proprietary, open architecture which supports third-party IP cameras, servers, storage, and switching hardware.
